

# THERMAL ENERGY RECOVERY TECHNOLOGIST

## LEVEL 1: BASIC OF HEAT RECOVERY OPTIMISATION

**17 - 19 June 2025 (Physical - KL/Putrajaya)**  
**Time: 8:30 am - 5:00 pm**

\*Date subject to changes. For latest date, refer to website.

**RM4,800 per pax** (Normal Rate)  
**RM4,700 per pax** (Register 30 days before workshop,  
or Group of 3)

\*Price excluding 8% SST charges

**Register Now!**

## WORKSHOP OVERVIEW

The Thermal Energy Recovery Technologist (TERT) course aims to develop professionals and certified experts in thermal energy recovery system using Pinch Technology. Successful participants of this course shall be awarded competency certification based on the level of completion. More than 7000 successful applications worldwide, including our own project experiences show that implementation of pinch technology typically provides an attractive payback period of less than three years.

For TERT Level 1 competency, participants will be equipped with the basics of heat recovery, analysing thermal energy losses from the processes, energy-saving potentials, and the tools to target and design the maximum energy recovery system based on Pinch Technology. Participants will be trained by using excel tools for calculations and is also introduced to our proprietary Optimal Heat software. Participants need to submit the completed excel calculation as proof they have mastered the competency.

## LEARNING BENEFITS

### **If you are an energy manager, energy auditor, or energy service company.**

1. Equip yourself as a TERT to manage thermal energy. The anticipated enactment of the Malaysia Energy Efficiency & Conservation Act (EECA) shall unlock opportunities for energy managers with the competency to audit, manage, and optimize thermal energy systems apart from electrical energy.
2. Gain competency to perform heat recovery optimisation. Learn from certified experts and practitioners on how to perform optimal thermal energy recovery analysis and gain the support of top management to achieve triple bottom-line benefits.
3. Offer value-added energy audit services for the ASEAN community. If you are an energy auditor, you will be able to offer value-added energy audit services to your customer by incorporating thermal energy recovery of the process. You can also offer energy audit services under the newly announced Energy Audit Conditional Grant (EACG) which supports energy auditing of both electrical and thermal energy. Widespread and holistic implementation of Energy Management System covering thermal and electrical energy in the region is expected to significantly increase the demand for thermal energy analysis experts in Malaysia and across ASEAN.

### **If thermal energy is the leading energy cost in your manufacturing site.**

1. ***Huge potential reduction in energy bills from thermal heat recovery.***
  - a. Over 7000 successful process integration applications worldwide, including our project experiences have resulted in thermal energy savings of between 10 to 50%, and a payback period of less than 3 years. Our recent petroleum refinery retrofit project for example amassed an annual savings of USD 12 Million.
2. ***"We already have heat recovery systems in place. How could we benefit more?"***
  - a. Our experience shows that plant renovation, plant expansion, the addition of new product lines, consideration of total site, and area-wide integration could lead to ample energy cost-saving potentials.

---

# CERTIFICATION LEVEL OVERVIEW

- 1) Thermal Energy Recovery Technologist –LEVEL 1: Basic Of Heat Recovery Optimisation
- 2) Thermal Energy Recovery Technologist – Level 2: Heat Recovery Optimisation for Retrofit Design
- 3) Thermal Energy Recovery Technologist – Level 3: Professional Certification
- 4) Thermal Energy Recovery Technologist – Level 4: Expert Certification

## LEARNING OUTCOMES

1. Understand the benefits and application of heat integration.
2. Understand the basic concept on heat integration and Pinch Analysis.
3. Target maximum energy recovery by using Composite Curves and Problem Table Algorithm.
4. Extract correct stream data for heat integration analysis.
5. Design heat exchanger network that achieves the maximum energy recovery target.
6. Design heat exchanger network that achieves the maximum energy recovery target with stream splitting.
7. Determine the minimum number of units.
8. Design heat exchanger network that achieves the minimum number of units.
9. Make the correct placement for multiple utilities.
10. Familiarise with Optimal Heat software for heat integration.

## COURSE OUTLINE

1. Maximising Energy and Resource Cost Savings in Industry using Pinch Analysis.
2. Process Integration based on Pinch Analysis - The Basic Concepts.
3. Setting the Minimum Energy Targets (Energy Targeting) using Composite Curves.
4. Significance of Composite Curves.
5. Energy Targeting using Problem Table Approach (PTA) with working session.
6. Stream Data Extraction (SDE).
7. Stream Data Extraction (SDE) Working Session.
8. Design of Heat Recovery Network (HRN) by using Grid Diagram.
9. Transferring Grid Diagram back to Flowsheet.
10. Design of Complex HRN (with Stream Splitting).
11. Minimum Units Targets.
12. Reducing Number of Units.
13. Economic Analysis.
14. Multiple Utility Targeting and Optimisation using Grand Composite Curve (GCC).

---

# WORKSHOP SCHEDULE

Day 1	
08.30 am - 09.00 am	Registration
09.15 am - 10.15 am	Maximising Energy and Resource Cost Savings in Industry using Pinch Analysis
10.15 am - 10.45 am	Process Integration based on Pinch Analysis - The Basic Concepts
10.45 am - 11.00 am	Break
11.00 am - 01.00 pm	Setting the Minimum Energy Targets (Energy Targeting) using Composite Curves with working session
01.00 pm - 02.15 pm	Lunch Break
02.15 pm - 03.15 pm	Significance of Composite Curves
03.15 pm - 03.30 pm	Break
03.30 pm - 05.00 pm	Energy Targeting using Problem Table Approach (PTA) with working session

Day 2	
09.00 am - 10.30 am	Stream Data Extraction (SDE)
10.30 am - 10.45 am	Break
10.45 am - 11.15 am	Stream Data Extraction (SDE) Working Session
11.15 am - 01.00 pm	Design of Heat Recovery Network (HRN) by using Grid Diagram + Working Session
01.00 pm - 02.15 pm	Lunch Break
02.15 pm - 03.15 pm	Transferring Grid Diagram back to Flowsheet + Working Session
03.15 pm - 03.30 pm	Break
03.30 pm - 05.00 pm	Design of Complex HRN (with Stream Splitting) + Working Session

---

# WORKSHOP SCHEDULE

Day 3	
09.00 am - 11.00 am	Minimum Units Targets
11.00 am - 11.15 am	Break
11.15 am - 12.15 pm	Reducing Number of Units + Working Session
12.15 pm - 01.00 pm	Economic Analysis + Working Session
01.00 pm - 02.15 pm	Lunch Break
02.15 pm - 03.15 pm	Multiple Utility Targeting and Optimisation using Grand Composite Curve (GCC)
03.15 pm - 03.30 pm	Break
03.30 pm - 05:00 pm	Working Session & Closing

---

## TRAINERS' PROFILES

TRAINER 1

### **PROF. IR. TS. DR. ZAINUDDIN ABDUL MANAN**

Prof Ts Ir Dr Zainuddin Abdul Manan FASc, PEng, CEng, Technologist, FIChemE, CEM, REEM is a professor of chemical and energy engineering of Universiti Teknologi Malaysia (UTM). He is the founding director of UTM Process Systems Engineering Centre (PROSPECT), founding Dean of the UTM Faculty of Chemical and Energy Engineering, founder of the UTM spin-off, OPTIMISE, the founder of UTM Sustainable Energy Management Program and the founder of COPE- BEST. He began his career as an engineer at PETRONAS and Hume Industries and has been an academic leader, educator, researcher, consultant and professional coach for over 25 years. He completed over 100 R & D & consultancy projects, has numerous patents and over 500 publications that include 20 books/chapters, over 250 refereed journals and 270 conference proceedings on sustainable resource planning and engineering (energy, water, emissions).

Zain is a UK/EU chartered engineer, a Fellow IChemE (UK/EU), a professional engineer (PEng), a professional technologist, a certified energy manager, a registered electrical energy manager and a certified trainer for ASEAN energy managers. Zain was the winner of Saudi's Prince Sultan International Prize for Water and was awarded as a Top Research Scientist of Malaysia. In 2014, he was awarded UTM Top Researcher and UTM Top Academician. He has been listed in Stanford University's World's Top 2% scientists. Zain has been a coach of professionals from over 600 organisations and delivered over 400 invited talks in professional courses, conferences and seminars worldwide.

Prof Zain is a Fellow, and was the chair of the of the ASM (Academy of Sciences Malaysia) Energy Committee (2021-2023) and chair of ASM Net Zero Task Force. He is also a chair of the Malaysia's EECA (Energy Efficiency and Conservation Act - Thermal Energy) Drafting committee. He was a member, and the Vice Chairman of the Board of Judges of ASEAN Energy Awards. In 2014, he was appointed as the Project Director for the Green Technology Blueprint for 57 OIC Countries, and as the OIC Ambassador for the World Green Growth Summit. He founded and spearheaded the UTM Sustainable Energy Management initiative that led UTM to achieve over USD 7 million energy savings between 2011 and 2021, to win the ASEAN Energy Awards in 2012, the National Energy Award 2022, the first AEMAS 3-Star ASEAN Certified Energy-Efficient organisation, and UTM to be ranked 1st globally by Times Higher Education on SDG7 -Affordable and Clean Energy.

---

## TRAINERS' PROFILES

TRAINER 2

### **PROF. IR. TS. DR. SHARIFAH RAFIDAH WAN ALWI**

Prof. Ir. Ts. Dr. Sharifah Rafidah Wan Alwi is a Research Fellow of Process Systems Engineering Centre (UTM-PROSPECT), and Professor in Faculty of Chemical and Energy Engineering in Universiti Teknologi Malaysia (UTM). She previously helmed as the Director of UTM-PROSPECT for ten years (2011 to 2021). She is an expert resource minimisation consultant for multiple industries and is among the leading researchers in resource integration technique development. Prof Sharifah is also the co-founder and Director of Optimal Systems Engineering Sdn Bhd, a UTM Spin-off company. She has been extensively involved in 80 research projects, 17 industrial based projects for various companies and government agencies and has trained engineers from more than 300 companies in the field of sustainable engineering design and management. Together with her team, they have developed 7 resource minimisation software.

Sharifah has won various international and national awards such as Green Talents 2009 (Germany), IChemE Highly Commended Sir Frederick Warner Prize 2011 (UK), ASEAN Young Scientist and Technologist Award 2014, National Young Scientist Award 2015, ASEAN-US Science Prize for Women 2016 in Energy Sustainability, Malaysia Research Star Award 2016, 2018, 2019, Top Research Scientists Malaysia 2018 and Sarawak State - International Women Award 2021. She was listed as 'Asian Scientist 100' in 2017 and 'Asia's Rising Scientists' in 2020, and '8 Women Scientists from Asia You Should Know' in 2021 by AsianScientist.com and World Top 2% Scientist 2022 (Single Year and Career Long). Sharifah is also the Associate Editor for Journal of Cleaner Production and UTM Sustainable Energy Management System advisor. She has also served as the Chair for the Science Leadership Working Group under Young Scientist Network, Academy of Sciences Malaysia (YSN-ASM) and Chair for Malaysia IChemE Young Engineer Group (YEG). Sharifah is also a professional engineer, a professional technologist, a UK/EU chartered engineer, a certified energy manager, a registered electrical energy manager and a certified trainer for ASEAN energy managers.

## TRAINERS' PROFILES

TRAINER 3

### **ASSOCIATE PROF. IR. DR. LIM JENG SHIUN**

Assoc. Prof. Ir Dr Lim Jeng Shiun is the Director of Products and Service, Optimal Systems Engineering Sdn Bhd, a UTM spin-off company specialising in providing solutions related to energy conservation and GHG emissions reduction. He is also the research fellow of Process Systems Engineering Centre (PROSPECT), Universiti Teknologi Malaysia. His core expertise is in the area of innovative development and application of process systems engineering techniques for resource conservation, and energy and carbon planning. Stanford University recognised him as one of the World's Top 2% Scientists.

Dr Lim is the Associate Editor for Journal of Cleaner Production, an international high-impact journal focusing on reporting the state-of-the-art related to GHG emissions reductions. He is also the technical secretariat and guest editor for the International Conference of Low Carbon Asia and Beyond. He is also a professionally Certified Energy Manager, Certified Energy Auditor, Accredited Energy Measurement & Verification Professional and a Registered Electrical Energy Manager certified by the Energy Commission of Malaysia. He is the trainer of the Energy Management Trainer Course conducted by MGTC to certify the Energy Manager. He is also the instructor for MSc Energy Management in UTM, sharing knowledge related to GHG emissions accounting and mitigation strategy.

Dr Lim is a key research team member for the project on the Development of Low Carbon Society (LCS) Scenarios for Asian Regions, an international joint research program between Japan and Malaysia. One of the key outputs of this project is the development of Energy Chapter of LCS Blueprint for Iskandar Malaysia 2025, which is endorsed by the Prime Minister of Malaysia during the COP 18 Doha Climate Change Conference. As an engineer in practice, he has applied the output of his research work to consultancy projects for the industrial community. He has been extensively involved in more than 35 industrial-based projects for various companies and government agencies. The key clients include local industries and multinational companies such as BERNAS, FABER MEDISERVE, SHELL, OLEON in Malaysia and PERTAMINA in Indonesia. He has assisted those companies to identify energy-saving opportunities worth millions of dollars and GHG reduction opportunities through the use of process integration and process systems engineering approaches in the energy audit and GHG emissions accounting projects.

He has shared his project experience in his co-authored book titled Pinch Analysis for Energy and Carbon Footprint Reduction, published by the Institution of Chemical Engineers (IChemE). He has been invited to share his experience on Net Zero carbon for industry and facilities, including on Net Zero Carbon for Palm Oil Industry organised by IChemE.

# WHAT OUR TRAINEEES Said

TERT 1 provides insights and practicality tools for industrial practitioners to discover thermal energy saving, by maximizing potential heat recovery while minimizing external cooling and heating duty requirement through pinch analysis.

**MOHAMAD FIRDAUS BIN AZIZAN**  
SE (TECHNOLOGY & PROCESS OPTIMIZATION)  
BASF PETRONAS CHEMICALS SDN. BHD  
Thermal Energy Recovery Technologist (TERT)  
- Level 1: User participant

This is an opportunity to learn from and to build network with established pinch practitioners in Malaysia. With the increasing energy prices, it is wise for companies to further improve and optimize their processes to stay competitive and profitable.

**MD SAIROL NIZAM BIN MD SAID**  
SENIOR MANAGER (TECHNOLOGY & PROCESS OPTIMIZATION)  
BASF PETRONAS CHEMICALS SDN. BHD  
Thermal Energy Recovery Technologist (TERT)  
- Level 1: User participant

Pinch Analysis is about understanding and optimizing the heat integration potential of a process. It's like a puzzle where different temperature streams need heating or cooling. The "pinch point", the critical temperature difference, shall be minimized to allow for energy-saving opportunities. Pinch Analysis can also be extended to optimize power consumption in addition to heat integration. While the foundational principles of Pinch Analysis were initially developed for heat exchange systems, the methodology's concepts and techniques can be adapted to address power integration and optimization within industrial processes.

**AUSTIN LIM**  
CONSULTANT  
IEN CONSULTANTS SDN BHD  
Thermal Energy Recovery Technologist (TERT)  
- Level 1: User participant
